Cardiff MRCS OSCE: Clinical Examination & Communication Skills

This intensive one-day revision course covered the clinical examination and communication components of the MRCS Part B exam, placing special emphasis on clinical consultation skills.

The course aimed to consolidate the delegates' understanding of the clinical consultation skills component of the exam. It also intended to aid the delegates' ability to perform clinical examinations efficiently by encouraging them to present their findings to the examiner in a systematic yet concise manner.

The morning session covered all of the important clinical examinations which are tested in the exam while the afternoon session was dedicated to communication skills workstations, structured interviews, and practical skills. Eight patient-centred clinical scenarios were used to reflect the situations experienced in everyday practice. These scenarios are in line with what is commonly tested in the MRCS exam. A total of 37 candidates attended the course and their feedback has been collated in this document.
